

STRUCTURED CABLING

You can rely on IT.

BOOSTING BUSINESS BENEFITS

An organized structured-cabling system lowers maintenance costs and the hassles of adding new devices. In addition to first-time installation, TelWare can clean up your existing data racks by reducing bulk, improving airflow, and decreasing network-equipment cooling costs. Easily accessible sockets for plugging in new equipment create a cleaner, uncluttered look. Such organization decreases human error, workflow disruptions and network downtime.

As a Building Industry Consulting Service International (BICSI) corporate member, TelWare provides cabling services businesses trust. BICSI, a professional association supporting the information-technology systems (ITS) industry, establishes quality standards for the design, installation and integration of cabling infrastructures. BICSI guidelines encompass fiber-, copper- and wireless-based systems.

Additionally, TelWare's certification as a Registered Communications Distribution Designer (RCDD) denotes internationally recognized expertise in telecommunications design and implementation. We have the experience and knowledge to ensure high-caliber performance and reliability
