

SIP TRUNKING

Modernize Your Current Phone System to Flexible SIP Trunks

SIP TRUNKING BENEFITS

Low Maintenance

Reduce Costs

Accessible

Flexibility

Improve Channels

Multi-Site

SIP trunking replaces the traditional onsite telephone connection. Instead of using a dedicated circuit for phone calls, SIP Trunks connect your current Business Phone System to telephone lines or (PSTN) using your internet connection.

TelWare's SIP trunking solutions cut high monthly phone bills, eliminate costly IT and maintenance fees, provide scalability and reliability. SIP Trunking offers advanced features such as multi-site termination, cloud redundancy, disaster reroute/recovery, call bursting, call recording, and call logging. SIP supports video as well as voice calls all in an easy to manage portal.
