

ONECLOUD TEAMS CONNECTOR

Users can choose which app to use anytime (OneCloud or Teams)

MAKE THE CONNECTION

You know your employees already love chatting in Teams. So why break up a good thing? They will be thrilled to know their new OneCloud phone will work on their teams app.

The OneCloud Teams connector turns Microsoft Teams into another extension device on your OneCloud Unified Communications Suite. Make calls, manage your settings, and access your end user portal without leaving Teams. Users can pick the device and app of their choice on OneCloud or Teams at anytime.

OneCloud provides end to end encryption of both signaling and media to maintain the highest security level.
