

MULTI-SITE

- *Cloud-based hosted solution*
- *Seamless transitions between locations*

TOGETHER TEAM?

Support a unlimited amount of users and sites whether they are across the street or across the globe. With geo-redundancy, users and sites will connect to their closest data center but still operate as if they were physically connected. No functionality is lost, and this allows for the best voice quality while allowing users to communicate as if they are in the same office.

ONE UCAAS SYSTEM

From five to five thousand sites, this cloud system can handle your needs. Be connected, whether your company is a large campus, has multiple headquarters, or manages multiple sites and subsidiaries.
